

PRESS RELEASE

LOUGHBOROUGH'S POWERNETICS SYSTEMS GAIN FURTHER MANUFACTURING ORDERS FOR GREATER MANCHESTER METROLINK

Following recent news about a large order for GMM's Metrolink Phase 3A tram extension Powernetics has recently received a further boost with a order for UPS Systems to replace those originally supplied by the East Midlands based manufacturer over 20 years ago.

UPS Systems are to be designed, manufactured & installed at High Street, Old Trafford, Piccadilly Gardens, GMEX, Victoria & Bury Station during 2010.

These systems compliment recent successful installations at Crumpsall & Timperley & are part of a combined signalling and telecoms renewal programme being conducted by Stagecoach Metrolink on behalf of GMPTC.

As previously reported the work is a clear indication of the continuing growth of Loughborough's East Midlands based specialist designer and manufacturer who are now in full production on both contracts at our Clarence Street based workshops.

Local industry suppliers in the East Midlands have also benefited from the scope of works which it is hoped will secure employment for the next two years and is a reward for the hard work and dedication put into the company by its employees during the downturn.

Sales Manager Jim Goddard commented that here was a classic example of loyalty being rewarded in the best way possible and ensuring the company's future aspirations as Powernetics seeks to expand above and beyond the current economic climate.

To do so with so little outside assistance is a particular achievement for which our staff can feel justifiably proud said Jim
